

October 2007

I am sending with this eNewsletter a new website we have created.

It provides a different way of using the Internet - it organizes information in a neat, clear way, by topic.

I have evaluated hundreds of websites and have personally selected and used those I believe are most useful for each topic.

I invite you to try the website, and would love to have any feedback on it.

If you'd like, please also forward it to employees, co-workers, friends and family. I would also love to have their feedback.

It includes access to both National and Local information. You can enter your own zip code and the Local information will be tailored to your area. When you travel, you can change the zip code to that local zip, and find information about the local area. When traveling, or away at school, you can also enter your hometown zip code to keep up with news in your hometown.

We have designed and tested it to work with different desktops, laptops, monitors, resolutions and browsers. If cookies are enabled, it also works with the iPhone.

I hope you will find it a useful way to take advantage of the power of the Internet in daily living, and for research in work and leisure.

I look forward to any feedback you, your co-workers, or your family and friends might have.

You can access the website at www.411US.info .

Thank you again for your business.

Jerry Guzi
